1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 13-17, drawn to a method of testing current sinking and sourcing capability of a driver, classified in class 324, subclass 158.1.
  - II. Claims 9-12, drawn to an apparatus for testing current sinking and sourcing capability of a driver circuit, classified in class 324, subclass 158.1.
2. The inventions are distinct, each from the other because:
3. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product can be practiced by one of the method claims in group I.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
5. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. A telephone call was made to the office of Mr. Anderson on 08/04/03 to request an oral election to the above restriction requirement, but did not result in an election being made.
